

SVENCHEM DUPLEX PUMP SKID

The SVENCHEM DUPLEX PUMP SKID is designed to provide a set in place chemical injection system that can supply redundancy and multiple points of injection. The SVENCHEM is designed and built to be a simple system to maintain and service. The pumps are connected to both the Suction and Discharge Manifolds with flexible tubing. This makes removing a pump a quick and simple process. The Discharge Manifold is valved so that either pump can supply chemical at any point of injection. Properly sized one pump can do the work of two.

SVENCHEM PUMP SKIDS are available in Simplex or Duplex configurations. The SVENCHEM PUMP SKIDS can be fitted with any type of positive displacement chemical pump. The Suction Manifold can include check valves to maintain prime. The Discharge Manifold can include Pulsation Dampeners, Anti-Syphon Valves, Back Pressure Relief Valves and Priming/Purging Valves.

The SVENCHEM PUMP SKID is constructed with a SS or Powder Coated Steel Chassis.
