

SVENCHEM

CHEMICAL INJECTION SYSTEM

The SVENCHEM Chemical Injection system is an easy to install, simple to operate method for injecting chemicals in water or wastewater. The calibrated, translucent day tank aids in recording chemical use. The flooded suction to the chemical injection pump eliminates priming and loss of prime problems.

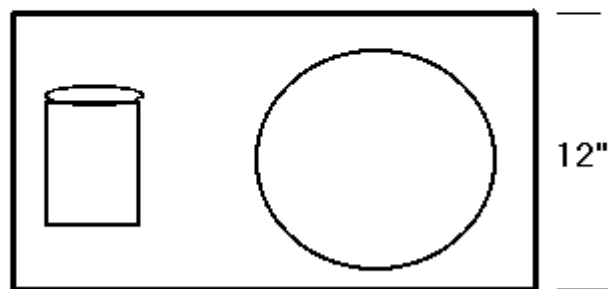

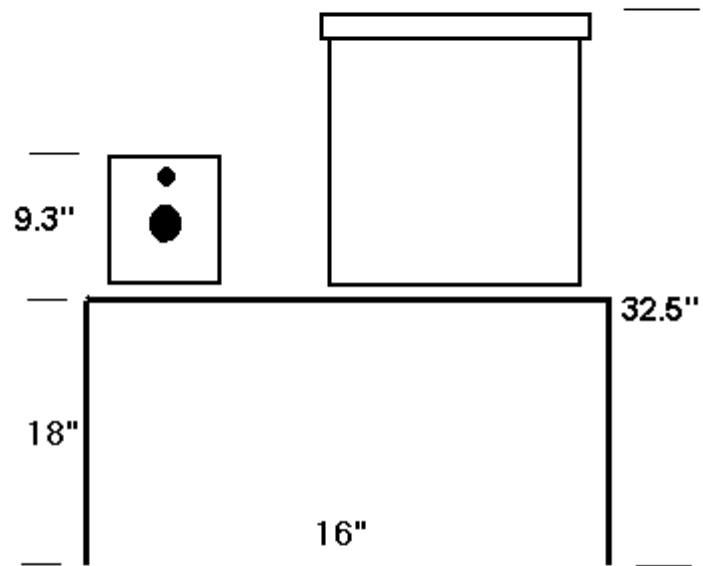

The SVENCHEM is sized according to the application and can be built to any specification. Chemical injection pumps are available from 0.05 GPH to 30 GPM. Tanks are available from 5 Gal. to 10000 Gal.
